

# MENOMINEE COUNTY

The information presented here represents data specific to Menominee County, Wisconsin from 2001-2006, and is meant to complement the report, *The Burden of Suicide in Wisconsin*. Please refer to this report for technical notes and suicide prevention strategies. For counties with fewer than 20 suicides each year, data are aggregated for 2001-2006 and findings are presented in bullets rather than tables.

## KEY FINDINGS

- ◆ The suicide rate in Menominee County for all years was higher than the state rate for all years (14.4 versus 11.8).
- ◆ Suicide represented a total of 164 years of potential life lost.
- ◆ The suicides were dispersed across age groups. However, the greatest number of hospitalizations and emergency department visits occurred in younger individuals between the ages of 5-34 years.
- ◆ Firearms were the most frequently used method in Menominee County suicides (50%).

Numbers and rates (per 100,000 population) of suicides, inpatient hospitalizations, and emergency department visits due to self-inflicted injuries, Menominee County, 2001-2006.
