

- x Summary: Displays a summary of the attempts a user has made at completing quizzes.
- x Interactions: Displays a list of the interactions corresponding to submitted answers to questions
- x Objectives: Shows a list of the objectives defined within the SCORM package, and the user's progress toward attaining them

To offer a more streamlined and intuitive interface, the new Content experience (Lessons) has been significantly updated for learners. It includes the following:

- x Enhanced table of contents: The new table of contents allows the learner to explore all available content within the course. At any time, the learner can choose an available module to view, and isn't forced to view modules in a specific sequence
- x Full screen viewer for content: When a learner decides what they want to view, clicking a module or topic displays the item in a full screen viewer, allowing them to focus exclusively on the content.
- x Completion tracking: New to the Content experience for learners, completion tracking allows a learner to see their overall completion of each module in the course, as well as completion of individual topics.
- x End of module experience" When a learner reaches the end of each module, a dynamic page congratulates them on their achievement or reminds them about incomplete content topics.

Top Hat

Top Hat presents an active blog on all things related to Educational Technology. This month's feature is the blog on [Active Learning](#).

Aquifer

Aquifer offers a host of resources with our [Institutional Subscription](#). Take a look!
